Igor Fenikowski
Full-Stack Developer

Work Experience

Tech Lead at
Martico, a logistics company
June 2021 to August 2023 (2 years, 3 months)

After over 2 years at the company apart from leading a team of 9 individuals in a peak period, I've become the project's Tech Lead, focusing mostly on **planning developments**, **creating system's architecture**, **mentoring** and **assisting** my team members, **optimizing** the application, "**hotfixing**" critical errors in production, **overseeing and fine-tuning** project's infrastructure on **Microsoft Azure**, managing the project in **Jira** and **recruiting** new team members.

Team Lead at
Martico, a logistics company
April 2020 to June 2021 (1 year, 3 months)

The initial successes of my project garnered attention, leading to the formation of a dedicated team of 4-5 individuals. Many new team members were junior developers, presenting a fresh challenge for me - **teaching clean code principles**, project conventions, **abstract thinking**, and emphasizing the importance of clear and consistent code for better understanding. My project entered production phase and got implanted in Spain and many foreign delegations outside of Spain.

Full-Stack Developer at
Martico, a logistics company
October 2019 to April 2020 (7 months)

I embraced the challenge of independently coding the company's **ERP system**, leaded by a project's architect. Throughout this process, I developed my skills in **Vue.js**, **Node.js**, and **MySQL**. Working in Valencia (Spain) allowed me to continue developing my language skills.

Summary

Software developer with **5 years of experience** in creating applications and websites. Master of Artificial Intelligence. Bachelor of Management.

Relevant Skills

- HTML, CSS, JavaScript, MySQL, Vue.js, React.js, React Native, Node.js, Python, Git, GIMP

- Microsoft Azure, Jira Software, Postman, MySQL Workbench

- Machine Learning, Deep Learning, Algorythms

Full-Stack Developer at
Freelance
January 2019 to October 2019 (7 months)

Driven by my early passion for programming, I dedicated myself to the tech industry. Through a series of programming courses, I developed my skills by **creating games and websites** for personal and client projects. This hands-on experience allowed me to sharpen my expertise in **HTML**, **CSS**, **JavaScript**, **Node.js**, and **React.js**, laying a strong foundation for my career.

Education History

Master of Artificial Intelligence
Valencian International University
Year of Graduation: 2021

Seeking new self-development opportunities and aiming to enhance my formal education in the IT field, I undertook and successfully completed a Master's degree in Artificial Intelligence at the International University of Valencia. Throughout the course, I got challenged with an abundance of subjects, including **complex mathematics**, **algorithms**, **machine learning** and **neural networks**, among others. As a culmination of my studies, I developed an artificial neural network that analyzed 3D models of pulmonary fibrosis patients' lungs and medical data to forecast the progression of the illness.

Bachelor of Business Administration and Management
University of Warsaw & University of Valencia
Year of Graduation: 2018

During my two years at the University of Warsaw and one year at the University of Valencia, I gained a comprehensive understanding of **management**, **economics**, **statistics**, **marketing**, **psychology**, and **finances**. To culminate my studies, I focused on mobile marketing in the pharmaceutical industry for my thesis. This experience has helped me become a better leader, improve my language skills and understand better how the world of business works.
